## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3 and 5-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gill et al. (6,113,637) in view of Michelson (6,139,550).

Gill et al. disclose an artificial disc replacement (ADR) device having a flange 34 and a retaining device 39 for retaining a pair of bone screws 37 in the device (see, e.g., Figs. 1-3 and col. 5, lines 32-39). The retaining device comprises a threaded attachment member. A head flange extends from the threaded attachment member and is abuttingly received against a side of the ADR flange. An outermost portion of the head flange is partially received over a portion of a pair of bone screws or prevent backout. Gill et al. disclose the claimed invention except for the concave shape and flexibility of the head. Michelson also discloses a device comprising retaining screws, e.g. 25, for bone screws (see, e.g., Figs. 12, 14 and 16 and col. 14, line 47 - col. 15, line 2). The retaining device comprises a convex, flexible head 23 to assist the locking device in riding over the top of a bone screw head to facilitate a surgical procedure. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the device of Gill et al. with a convex, flexible head on the

Art Unit: 3733

retaining device, in view of Michelson, in order to assist the locking device in riding over the top of the bone screw head and facilitate the surgical procedure. It is noted that upon flexing, the convexity of the head would decrease such that the head would become flatter. The method of claim 8 is inherent in the device of the combination of Gill et al. and Michelson. Regarding method claims 14-18, the limitations therein have not been given patentable weight since they do not affect the actual steps of the method in a manipulative sense. Moreover, it would have been further obvious to have provided any desired number or configuration of stress reliefs (i.e. slots) in Michelson, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

## Response to Arguments

Applicant's arguments filed 15 June 2007 have been fully considered but they are not persuasive.

Applicant argues that "the only structure Michelson teaches is providing slots or slots [sic] which do in fact extend through the outermost portion of the head flange retaining device." (See Applicant's Remarks, page 7.) In response, it is noted that there are a plurality of portions that can be considered to be "outermost" and the slots do not extend through all of them. In addition, that the inventions of Gill and Michelson may appear "quite different," in Applicant's opinion, from Applicant's own invention, does not preclude their application to the limitations positively set forth in the claims.

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Comstock whose telephone number is (571) 272-4710. Please leave a detailed voice message if examiner is unavailable. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached at (571) 272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
